

SPRING TRANSITION (Warm Season)

Building carbohydrates and limiting excess growth is crucial for bermuda and zoysia during early spring. This program provides essential nutrients as well as sugars, amino acids, and biostimulants that help to transition warm-season turf from cold to warm weather.

Foliar-Pak® Foundation Forty | 2 oz per 1,000 sq ft

Foundation Forty is a highly concentrated blend of specific amino acids that increases plant energy, builds proteins, and improves carbohydrate storage. It also improves plant metabolism, especially photosynthesis, and enhances the uptake of other nutrients and spray tank additions.

Foliar-Pak® Grow-In | 9 - 12 oz per 1,000 sq ft

Grow-In takes the guesswork out of building a program for turfgrass establishment. It combines the foliar nutrients most necessary for rapid turfgrass establishment into one jug.

Foliar-Pak® Micros Plus | 2 oz per 1,000 sq ft

Micros Plus improves lateral growth of stolons and rhizomes and enhances foliar recovery. It also improves cell division, nutrient use, and photosynthetic properties and helps turf maintain a healthy green color.

Foliar-Pak® Calcium | 2 oz per 1,000 sq ft

Calcium was formulated using three natural and modified plant metabolites specific for protecting calcium. With limited root uptake during early spring, Calcium is an important supplement for optimal spring performance.
