

LDS SPRAY

This spray program addresses greens dealing with localized dry spot (LDS). It reduces soil surface tension, penetrates the soil profile, and increases water infiltration to the root zone. Research has shown that once the spray reaches the region of hydrophobicity, it directly addresses the root cause of LDS. The spray strips organic acids off sand particles and reverses the hydrophobic effects of LDS.

HydroPak® Matador | 6 oz per 1,000 sq ft

Matador is a safe, non-ionic wetting agent based on innovative block polymer technology designed to establish and maintain a consistent moisture level in the root zone. It works by breaking down the hydrophobic coatings in certain soil profiles that reduce water repellency. It also balances the root zone moisture conditions that improve oxygen levels and plant stress tolerance, increases microbial activity and plant metabolism, and is safe to use on all types of turf throughout the growing season.

HydroPak® Command | 8 - 16 oz per A

Command enhances water and nutrient delivery to plant roots by reducing soil surface tension and improving water infiltration. It contains an organic acid that addresses bicarbonate problems, which can impede water absorption. Command also facilitates water movement through dense organic layers, helping to alleviate conditions in oxygen-deprived soils.
