

PATCH DISEASE SPRAY

If your property historically deals with issues from patch diseases, this program will assist with cultural tools to comprehensively combat those stressors. It provides a complete fertility approach catered to five key components: ammonium sulfate, manganese, phosphorous, potassium, and Foliar-Pak AminoPrecise® amino acids. Research has demonstrated that these nutrients culturally address spring dead spot, summer patch, and take-all patch.

The program also delivers spoon-fed nutrient rates for safe, continual summer applications so plants maintain turgor pressure under intense biotic and abiotic pressure. Additionally, it provides a rapid and consistent color response in turf under stress and utilizes ammoniacal nitrogen, a very efficient nitrogen source in high-pH soils.

Foliar-Pak® Foundation Forty | 1 oz per 1,000 sq ft

Foundation Forty is a highly concentrated blend of specific amino acids that increases plant energy, builds proteins, and improves carbohydrate storage. It also improves plant metabolism, especially photosynthesis, and enhances the uptake of other nutrients and spray tank additions.

Foliar-Pak® Patch Amino 5 | 3 - 6 oz per 1,000 sq ft

Patch Amino 5 is an all-in-one product that provides a cultural solution to spring dead spot, summer patch, and take-all patch on golf courses. It contains five key nutrients: ammonium sulfate, manganese, phosphorous, potassium, and AminoPrecise® amino acids.

Foliar-Pak® Manganese | 1.5 oz per 1,000 sq ft

Manganese with AminoPrecise® uses specific amino acids to fully chelate the manganese ion, which allows for maximum foliar entry into the plant.
